DETAILED ACTION

1. This application has been examined.
2. The amendment filed 6/14/99 has been entered. Per applicant request, claims 5 and 19-27 have been cancelled.
3. The following is an examiner's statement of reasons for allowance: Application shows a novel network device with a multilayer management interface which is configured to receive different sets of messages according to different protocols from different sources. The prior art shows network management systems which may exchange messages according to respective protocols within two interface layers, but the present invention goes beyond in supporting a third interface layer configured to receive commands from a user and in response send a fourth set of messages to the first interface layer according to the first protocol, and receive responses to generate a display. The first layer is a combined text interface generator and HTTP client. The second layer is a combined HTTP server and Simple Network Management Protocol (SNMP) manager. The third layer is a SNMP agent that has direct access to the configuration data of the access device. The features of the present invention of embedding and transferring of different sets of messages in different protocols from different sources, as brought out in the present invention, are not set forth in the prior art of record.

Art Unit:

Independent claim 1, amended, shows the network device with the three interface layers. The first interface layer is configured to receive a first set of messages from a first set of sources according to a first protocol, send a second set of messages according to a second protocol in response to the first set of messages, and send responses to the first set of sources according to the first protocol. The second interface layer is configured to receive a third set of messages, including a message from the second set, from a second set of sources including the first layer, according to the second protocol; update configuration data of the network device in response to receiving the third set of messages; and send responses to the third set of sources according to the second protocol. The third interface layer is configured to receive commands from a user, send a fourth set of messages to the first interface layer according the first protocol in response to the commands, receive responses to the fourth set of messages from the first interface layer according to the first protocol, and generate a display. Independent claim 7 shows the method, and brings out the HTTP and SNMP types.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Steve Sax, whose telephone number is (703) 305-9582. The examiner can
